Water Technical Unit (SEW) U.S. Environmental Protection Agency P.O. Box 8127 Boston, Mass. 02114

RE:

Submission of Discharge Monitoring Reports Permit No. MA0000833

Dear Sir/Madam:

This report is being submitted on behalf of Exxon Mobil Oil Corporation. The September 2011 sampling data has been submitted via the NetDMR system to the US EPA including the permit-required analytical reports for the following period:

- September 1 30, 2011 (monthly DMR)
 - Sampled from outfall 001A on September 6, 2011
 - There was no discharge from outfall 001B during the month of September 2011

In follow up to the Total Suspended Solids (TSS) monthly average permit limit exceedence reported from the August 2011 storm event sampling (32 mg/L), the TSS concentration in the September storm event sample, 4 mg/L, is in compliance with both the daily maximum limit (100 mg/L) and monthly average permit limit (30 mg/L).

The ExxonMobil Pipeline Company's Stormwater Pollution Prevention team will continue to review and evaluate facility Best Management Practices that include routine site inspections, structural controls and preventive maintenance activities to minimize solids runoff into stormwater drains throughout the terminal.

Please also note that Whole Effluent Toxicity (WET) testing was performed in September 2011 in accordance with current permit requirements. The NetDMR 001-P

WET Test from 2000 Permit for monitoring period ending 08/31/2011 has been revised and is being resubmitted to include the test results, LC 50 >100%.

If you have any questions, please contact me at (617) 381-2802 or Michael Butler at (617)-381-2872.

Sincerely,

Ernest Haynes

Terminal Superintendent
